

# Bellisse® Compressure Comfort® Bra

#3 CSL

The Compressure Comfort® Bra was developed for lymphedema and other post surgical edema management issues. Specially designed by Lesli Bell, PT/CLT - LANA, and Lisa Lindahl, inventor of the Jogbra®, it features the unique, patented Compressure Comfort® System, which offers comfort and gentle compression in a non-restrictive manner for swelling of the trunk and or breast which typically follows chest and/or breast surgery and for patients who are afflicted with chronic breast/truncal lymphedema.

What is unique about the Compressure Comfort® Bra? Simply put, conventional bras are not designed to deal effectively with lymphedema or post-surgical discomfort in the chest and breast area. The thin straps, non-stretch cups, and under wires found in conventional bras can increase pain and irritate tender tissue. Sports bras provide needed compression -- quite often *too*

*much* compression -- and their lack of adjustability and short silhouette make them uncomfortable for many patients to wear. The patented Compressure Comfort® Bra utilizes expert engineering, state-of-the-art fabrication and high-quality construction to apply continuous gentle compression and support to the chest and breast area, and can be worn comfortably and unobtrusively under clothing.

## Features:

- Gentle COMPRESSION all around the torso
- Unprecedented ADJUSTABILITY with both a front zipper and a 3-position back closure
- Attractive shape that can be worn comfortably and UNOBTRUSIVELY under clothing
- Adjustable, comfortable, and unobtrusive design elements that combine to form a SUSTAINABLE treatment aid that women can really use every day

## Indications for use:

Chest and breast Edema and or Lymphedema

## Contraindications:

Infection
